

# Helping Customers "Tap Into The Network"

Net Optics is the leader in passive network access for security and management applications. Our products allow customers to see 100% of their network traffic without introducing a point of failure. Breakthrough technology is central to our solutions and provides complete, permanent visibility into any network link without disturbing traffic in any way. Our customers can monitor, troubleshoot, and secure their networks around the clock without affecting traffic or introducing a point of failure.

We have listened to our customers, and the network and security monitoring communities to create the products they need. Each engineering effort supports our market leadership by delivering industry first features and innovative problem solving solutions.

Our complete family of network access solutions are deployed by customers globally including:

- Service Providers
- Enterprise
- Government
- Financial Institutions
- Telco
- Healthcare
- Retail

Each family of product provides support for multiple topology and link types for organization wide plug and play deployment. Our suite of integrated fiber and copper products consist of:

- Network Taps
- Aggregator Taps™
- Regeneration Taps™
- Bypass Switches
- Media Converters
- Director™

Custom design, rapid turnaround, and compatibility with all major networking, management, and security products ensures a seamless solution for fast, reliable and secure

network access. All Net Optics innovations are designed, manufactured, and tested in our facility.

Net Optics also ensures our customers' success with industry-leading service and support. We are committed to building long-term relationships with a guarantee of a "Customer First!" experience by providing personal assistance for each customer's network and security requirements. All product designs and packaging exemplify our philosophy for simple to use, play-and-play deployment.

Net Optics is a private company that has remained profitable for every quarter since its inception. Headquartered in Santa Clara, California, we maintain a global market presence through leading partner and reseller networks. Customers range from the industry's largest, including the Fortune 500, to global governments, small and medium businesses and the worlds leading network labs.

We remain the market leader through a vision that intelligence within our products satisfy customer needs for monitoring, troubleshooting, and securing their most important business investment - the network.

*Customer First!*
